

Press release April 2016

SAVE THE DATE: HANNOVER MESSE 2016

Chemnitz, April 11th, 2016: With "Software freaks looking for mechanical engineers" digitronic® shows off the innovative power of a start-up in the Start-up Corner at the Hannover Messe.

By Matthias Kirchhoff

Thomas is just now putting the last part on the prototype, fastening it at the stress point and turns the material to harder plastic. "Now it will meet the hardness requirements," he mutters and sends the model to the 3D-printer in the factory hall. Then Thomas puts on the Augmented-Reality-Goggles, shuts down the e MyCapp™-App and puts his tablet down –just in time: Because he's ready to spend time with his family. Thomas really appreciates the flexibility in his workplace.

Work at the home office and in Industry 4.0 could soon look like this- or similar to this.

But how can the communications route between Thomas' Tablet and the 3D-printer in his employers' factory workshop, be hardened to be break-in proof? How does one determine whether or not Thomas' draft model was altered en route to the 3D-printer? How can one make sure that competing companies don't get access to sensitive machine data?

And what role does MyCapp™ play in this?

On April 28th and 29th, 2016 Matthias Kirchhoff, the CEO of digitronic® and both head and motor of his team of highly qualified „Freaks“, will provide answers to these urgent questions in the futureSAX-Start-up Corner (**Hall 3, Booth B06**)!

With MyCapp™ digitronic® presents its unique concept for the integration of mobile end-devices while at the same time assuring digital confidentiality in industry-

4.0-Landscapes. MyCapp™ transposes confidentiality into a logical level that is independent of the device and operating system. Mechanical engineers should be able to remain mechanical engineers, to use a confidential environment and able to still adapt the perspective personally. Security-critical programming can be omitted.

Are you a product developer, entrepreneur or mechanical engineer like Thomas...? Then come to the Start-Up Stage (Hall 3, Booth A01) at the Hannover Exhibition Centre on April 28th, 2016 from 12:30 to 13:00 as well as on April 29th, 2016 from 12:30 to 13:00 and enter into productive dialogue with Matthias Kirchoff, discussing how one gets these ideas "off the ground" as quickly as possible.

About digitronic®

digitronic® computer systeme gmbh is a German manufacturer founded in 1990 in Chemnitz and develops software and systems for communications and IT-security for German government ministries, large-scale customers and medium-sized businesses. digitronic® is the regional office for the German National Association for IT-Security e.V. TeleTrust and bears the -IT-Security Made in Germany- seal of quality.

The business fields are: Confidentiality (software for preventative protection of sensitive data) – communication (development and operation of secure communication for police, disaster relief and industry through UMS 7.x) – security (simple, auditable RFID solutions through Secure Logon) – Consulting (independent expertise leads to adequate solutions for customers).
