Press Release September 2016

Chemnitz, 15th of September 2016 **Linux – Encryption! So you can save your data with HiCrypt^{TM} 2.0**

by Katja Kunke

From now on our customers could benefit from our multiple awarded technologies and use HiCrypt^{TM} 2.0 for Linux.

Comprehensive protection for confidential and secret information is playing a larger and larger role in today's global world and is a great challenge for every business, whether an LLC or a major international company. HiCrypt™ 2.0 offers the highest degree of confidentiality for your sensitive data. HiCrypt™ 2.0 is for example used by human resources departments, by executive managers, by staff councils, works councils, by construction departments in the automobile supplier industry or by banks.

HiCrypt™ 2.0 encrypts data on network drives and facilitates common access to encrypted files and folders. Where ever you store your documents: whether on the company network, in the home office or in your on-line storage in the cloud, with HiCrypt™ 2.0 you hold the key to the security of your data in your own hands.

"The first big successes in the automotive supply sector are evidence of the high demand for our high-quality product solutions," says Matthias Kirchhoff, managing director of digitronic® computersysteme gmbh. "To meet an optimal customer demand, we have significantly increased our development capacities and have invested in new technologies."

The distribution of HiCrypt™ 2.0 in Linux is solely carried out in the context of the All-In-One safety packages, which include the data encryption, 2-factor-authentication, the necessary hardware keys as well as the roll-out support on-site.

This year, digitronic® will be presented at the International Suppliers Fair (IZB) in Wolfsburg, Europe's leading trade fair of the automotive supply industry. One of the highlights presented there is our All-In-One Compliance solution that has been specifically developed due to the increasing demand from the automotive supply sector.

Those interested find digitronic® in hall 3, booth 3205 where we will offer lectures on audit requirements and life presentations of our product solutions.

About our company:

digitronic® computersysteme gmbh, headquartered in Chemnitz, has been realising solutions in the fields of communication, IT-security and digital confidentiality since 1991. With a clear focus on reliability, customer-friendly service and functionality, our dynamic, highly-motivated team develops innovative solutions.

With the digitronic® All-In-One Compliance-Packages, all the audit requirements according to 2-factor-authentication and team encryption are fulfilled.

Our current research and development focuses, in close collaboration with our major customers, on mobile, platform-independent confidentiality as a proof for non-manipulated image information and sensitive control processes in the environment of Industry 4.0.
