

Press Release March 2015

By Katja Kunke

Chemnitz, March 26, 2015: **Innovation Award IT 2015 - MyCapp™ impressed and belongs to the best.**

MyCapp™ scored points right in time for the start of the CeBIT. "Congratulations, your product impressed us and belongs to the best in the INNOVATIONSPREIS-IT 2015 (IT innovation award) "Apps" category," according to an email received last Monday. "We were very excited about the award and were once again able to prove our desire to innovate and our diversity," says Peter Liebing. A renowned specialist jury consisting of 100 scientists, branch experts and technical journalists evaluated MyCapp™. Excellent and innovative concepts for the greatest-possible user-friendliness and easy, intuitive interaction with IT systems are awarded. The award, with a certificate and signet, is a symbol for the innovative power and effort behind the distinguished IT products and solutions.

Dipl.- Ing. Matthias Kirchhoff and Dipl.- Ing. Steffen Ranft got the inspiration for MyCapp™ from a customer request from the governmental agency sector. "Creative software approaches increase the degree of security," according to Matthias Kirchhoff. Since security and confidentiality are functions people expect, these functions must be successfully abstracted to a level at which devices and operating systems play a subordinate role. With MyCapp™, we have successfully developed an app that moves digital confidentiality to a logical, device-independent layer. The functionality of the solution can be expanded by the company itself and thus unites the use of private end devices for business purposes and company data protection guidelines. MyCapp™ ensures, for instance, the platform-independent connection of mobile devices to processes that interact confidentially in the framework of Industry 4.0.

In short: one app, all devices, all use cases

Information for the press:
