

Press release June 2015

HiCrypt™ 2.0 – another “protected” chapter in a success story

Chemnitz, 29 June 2015: today digitronic® computersysteme gmbh announces the release of HiCrypt™ 2.0 for 1 July 2015.

Von Peter Liebing

With the release of HiCrypt™ 2.0, the new version of the HiCrypt™ encryption software, successful on the market since 2012, digitronic® is meeting the demand for even better protection of confidential or secret data. Using USB Smartcard Tokens HiCrypt™ 2.0 now supports two-factor authentication (knowledge and possession). It is now possible to realize environments where access to protected data is exclusively permitted with token AND matching PIN.

“For our developer team it was fascinating to see how HiCrypt™ moved on. With the new features you can now access your sensitive data even safer. Numerous successful audits of the automotive industry are proof to this. HiCrypt™ 2.0 makes the work even more comfortable” says Alexander Schuschies, IT application developer of digitronic® computersysteme gmbh.

If the user also wants to use two-factor authentication to log onto the operating system, the additional digitronic® software solution Secure Logon is available. It fully supports the USB Smartcard Token already in use – one token, two log-ons. Another highlight of HiCrypt™ 2.0 is the implementation of password security guidelines often required in company environments. HiCrypt™ 2.0 makes sure that individual password guidelines can be defined. Different criteria such as length, complexity and validity period enable flexible implementations.

HiCrypt™ 2.0 will be released on 1 July 2015.

Further information about HiCrypt™ and sources of supply are available under:
www.digitronic.net/aktuelles and www.hicrypt.com.

Pricing for a Standard License HiCrypt™ 2.0 is at 199,- Euro plus VAT without token support or 249,- Euro plus VAT with token support. Quantity discounts are available.

Of course HiCrypt™ 2.0 is available as terminal server license and floating license.

About our company:

digitronic® computersysteme gmbh is a German manufacturer, founded 1990 in Chemnitz and develops software and systems for communication and IT security for federal ministries, key accounts and small and medium-sized companies. digitronic® is the regional office of the Federal Association for Information Technology e. V. TeleTrust and carries the seal "ITSMIG" (IT Security Made in Germany)".

The business segments are: Confidentiality (software for the preventive protection of sensitive data) – Communication (developing and operating secure forms of communication for the police, disaster prevention, and industry by using UMS 7.x) – Security (simple, auditable RFID solutions via a secure logon) – Consulting (independent expertise resulting in appropriate solutions for clients).
