

Press release May 2015

Forum für Kooperation, Innovation & Netzwerke - Chemnitz 2020

By Peter Liebing

Chemnitz, May 2015: At May 21st 2015 for the first time the event „Chemnitz 2020 – forum for cooperation, innovation & networks“, took place at the fair ground of Messe Chemnitz as a presentation platform of business-related services

72 exhibitors from different service sectors thereby gave presentations to the visitors.

In three forums speakers from business, science and associations occurred with their imaginative solutions to the issues of innovation, collaboration and networking. Announced by the presenter as a representative of the regional office of the Federal Association for IT security TeleTrusT, Mr. Kirchhoff gave a lecture on the topic "Mobile devices securely in the production environment – an utopia?".

Mr. Kirchhoff followed up on the comments of the keynote speaker and emphasize that in addition to the illustrated theoretical basics for innovation management, especially in small businesses, the thoughts of potential employees and the will to create something new will survive and the "Great Coming Out" released.

The, after his speech, presented project MyCapp™ is "attentive listening to customers." It offers an economically and ecologically valuable thoughts approaches to innovation, which opposes an effective alternative against BYOD worriers of ongoing argued mantra of uncontrollable safety risks. MyCapp™ shifts the digital confidentiality in a logical, device and operating system-independent level. The app can be expanded in the future by the company itself in its functionality. The "process renewal" on almost any mobile device will allow far in the future drastic savings in the procurement of machine control systems specially manufactured special equipment. Matthias Kirchhoff called to consult directly digitronic[®] if there are needs for app development for "process renewal" and to consider whether the MyCapp™ technology holds, what is promised.

About our company:

digitronic® computersysteme gmbh is a German manufacturer, founded 1990 in Chemnitz and develops software and systems for communication and IT security for federal ministries, key accounts and small and medium-sized companies. digitronic® is the regional office of the Federal Association for Information Technology e. V. TeleTrusT and carries the seal ITSMIG e.V. (IT Security Made in Germany).

The business segments are: Confidentiality (software for the preventive protection of sensitive data) – Communication (developing and operating secure forms of communication for the police, disaster prevention, and industry by using UMS 7.x) – Security (simple, auditable RFID solutions via a secure logon) – Consulting (independent expertise resulting in appropriate solutions for clients).
