

Press release April 2015

By Katja Kunke

Chemnitz, 15. April 2015: **2015 IT INDUSTRY AWARD - MyCapp™ is one of the best innovations in the IT industry.**

Huber Verlag für Neue Medien GmbH awarded for the tenth time the INDUSTRY AWARD to innovative and advanced industrial companies. The award recognizes outstanding German-speaking companies once a year, which rise to the current global challenges in the industry with especially smart and beneficial products and business strategies. MyCapp™ could score again in time for the start of the Hannover fair. "Congratulations, your product has convinced and belongs in the category "IT & software solutions for the industry" to the best", it was said last Monday in an e-mail. A well-known expert jury of professors, scientists, industry experts and journalists examined also this year all entries on their technological, economic, environmental or social benefits. "The fact that within a few weeks we have been given the second award, is an indication of the high degree of innovation of solutions coming from our house," says Peter Liebing.

Dipl.-Ing. Matthias Kirchhoff and Dipl.-Ing. Steffen Ranft received inspiration for MyCapp™ through a customer requirement from the government sector. "Creative software approaches increase the level of security", says Matthias Kirchhoff. Since security and confidentiality are features that people expect, it must be possible to abstract these functions to a level, in which devices and operating systems play a subordinate role. We have managed to develop an app with MyCapp™, which shifts the digital confidentiality to a logical, device-independent level. The solution can even be expanded in terms of its functionality by the company and thus official use of private terminals is in agreement with the company's privacy policy. For example, the platform-independent MyCapp™ ensures connection of mobile devices to process flows, which interact confidentially in the context of industry 4.0.

In a nutshell: one app - all devices - all use cases

Note for the press:

The Managing Director of digitronic® computersysteme gmbh is happy to make himself available for interviews. Please refer to our contact below for interview requests.

About our company:

digitronic® computersysteme gmbh is a German manufacturer, founded 1990 in Chemnitz and develops software and systems for communication and IT security for federal ministries, key accounts and small and medium-sized companies. digitronic® is the regional office of the Federal Association for Information Technology e. V. TeleTrusT and carries the seal "ITSMIG e.V. (IT Security Made in Germany)".
